PIONEERING THE 5- POINT WASTE MANAGEMENT SYSTEM

Asset Homes as a responsible builder has always strived to promote and adopt the best practices in the industry for providing a clean, safe and healthy environment. As part of this great initiative, we are now introducing a unique 5 point waste management system for efficient management of organic and non-organic waste at our projects. This waste management initiative is founded on the principles of Reduce, Recycle and Reuse.

There are broadly 5 types of wastes that can be identified in any location. They are degradable, non-biodegradable, waste to incinerate, e-waste and medical waste. For each kind of waste there is a colour-coded bin that is kept for its collection at the apartment premises. The Green Bin for degradable waste, the Blue Bin for non-biodegradable waste, Orange Bin is for e-waste, the Yellow Bin for wastes to be incinerated and the Red Bin for Medical Waste.

DEGRADABLE WASTE MANAGEMENT

The degradable waste management is done through converting the degradable waste into manure with the aid of the special processing unit. The end product can be used for home gardens or for agriculture. It's a system approved and adopted by the CREDAI Clean City Movement.

NON-BIODEGRADABLE WASTES

The non-biodegradable wastes include rubber tyres, plastics, glass bottles, fiberglass, styrofoam and metals. These wastes are converted into pellets using a processing unit and then used for paving roads and for other commercial purposes with the help of the CREDAI Clean City Movement in Kochi.

E-WASTE

The e-waste include discarded computers, office electronic equipment, mobile phones, television sets and refrigerators. There is a special provision made for collecting and stocking this kind of wastes within the apartment premises.

WASTE TO BE INCINERATED

Incineration involves combustion of organic substances contained in waste. High temperature waste treatment systems are installed at the top of all apartment buildings to convert waste into ash.

MEDICAL WASTE

It includes all waste of medical or laboratory origin like packaging, bandages, infusion kits and so on. The medical waste due to its contaminated nature and propensity to cause injury is given exclusive provision for safe collection and stocking.

The 5 point waste management system is introduced at our new projects with a view of creating more hygienic and sustainable living environs that facilitate convenient and comfortable living in the city.

RESPONSIBLE SOLUTIONS FOR WATER MANAGEMENT

Water scarcity is a global phenomenon and combined effort of all stakeholders is essential to evolve a strategy for ensuring water balance. The National Building Code suggests that the daily consumption for person per day for residences should be limited to 135 litres. We believe this can be reduced and further optimized without reducing hygiene standards. This is possible in two ways.

- We will provide LEED compliant water efficient fittings with the possibility of reducing water consumption by 20 to 30 percent vis a vis conventional fittings. The savings in water consumption will directly reduce costs towards:

Water storage ➤ Water generation / sourcing ➤ Water treatment ➤ Water transmission by pumps ➤ Water heating ➤ Sewage treatment translating to lower maintenance costs and reduced impact on environment

- A commitment from you, our valued client, that you will actively encourage a philosophy of saving water by the simple method of shutting off the tap when not in use.

OUR STRATEGY ENVISAGES FURTHER:

- A transparent policy on sourcing water for various uses - Water balancing
- Rain-water harvesting including storage, treatment and reuse of rain water
- Treatment of sewage to recover water for use in flushing and landscape irrigation.

WATER BALANCING				
Sl. No	Water Sources	Onsite Treatment Provision	Usage	Name of Water
1	<ul style="list-style-type: none"> • Corporation / Municipality / KWA 	Yes	<ul style="list-style-type: none"> • Drinking water (1 point in kitchen) 	Drinking
2	<ul style="list-style-type: none"> • Bore well • Well water augmented • Rain water from roof during monsoons • Bowser water during emergencies 	Yes	<ul style="list-style-type: none"> • Washbasins • Kitchen sinks • Ablution faucets • Showers • Washing machines • Dish washers • Swimming pool make- up • Water body make-up 	Domestic
3	<ul style="list-style-type: none"> • Treated effluent from STP 	Yes	<ul style="list-style-type: none"> • Flushing of water closets • Gardening • Car wash 	Flushing - Subject to technical feasibility

Notes: • Excess rainwater will be disposed off either by ground water recharging, deep well injection or led to external storm water. The procedure adopted may be any one or a combination of the methods outlined above. The strategy for disposal will be as dictated by the underground water table levels and availability of external municipal storm water drains. A similar process will be adopted for disposing off excess treated effluent. Needless to mention adequate treatment facilities will be provided to ensure that the effluent will be treated to levels which will safeguard against contamination of the underground water table. Kerala Pollution Control Board norms will be complied with, in this regard.

- All water supplied for use will be treated suitably ensuring human health is not endangered. Where treated effluent is used as in the case of flushing and gardening, suitable cautionary notices will be provided to protect against inadvertent misuse.
- Drinking water and domestic water will be treated to ensure compliance with drinking water standards
- Flushing water standards will comply with those laid down by Kerala Pollution Control Board.
- KWA/corporation water will be provided, subjected to availability and government sanction.
- Individual water meters will be provided for each apartment.
